

Here are the criteria that you need to follow for your zoo. Make sure you read through everything before you start planning. Once you start designing, you can check off the individual buildings/enclosures. On your grid paper, one box is 10 feet by 10 feet. There are area and perimeter guidelines included. Your buildings and enclosures can be larger than what is listed.

SIDEWALKS

You will need sidewalks leading to all of your buildings and enclosures. Keep your zoo visitors in mind. Many zoos use paths through different enclosures that all meet back up at the same location. Your sidewalk path will be ten feet wide. You can create large gathering areas by placing sidewalk paths together.

BUILDINGS

There are some specific buildings that you need to include in your zoo. All buildings must have sidewalk touching it (if not completely surrounding it).

- ☐ Ticket Booth: This must be placed at the entrance of your zoo.
Perimeter minimum: 6 units
- ☐ Food Stand
Perimeter minimum: 8 units
- ☐ Zookeeper Building
Perimeter minimum: 10 units
- ☐ Storage Facility
Perimeter minimum: 10 units
- ☐ Bathrooms
Perimeter minimum: 4 units
- ☐ Stage
Perimeter minimum: 4 units

ANIMAL ENCLOSURES

Your zoo needs 10 different animal enclosures. The animal's profile page shows you the options that you can include. Read the profiles carefully and make sure you have enough room in your zoo for all of your enclosures. Your animal enclosures do not need to be square or rectangle. Sidewalks must be connected to the animal enclosures.
